INTRODUCTION

This new, revised report is a compilation of data collected from Montana public libraries for the fiscal year July 1, 1993 - June 30, 1994. Included are statistics reported by the libraries as well as selected per capita computations, charts, graphs and federation analyses.

The 82 main public libraries in the state have been assigned to one of seven groups based on the service area population (not the city population). Service area population is the number of people in the geographical area for which a public library has been established to offer services and from which the library derives income, plus any areas served under contract. The service area population of each group, (Over 25,000; 10,001-24,999; 5,001-10,000; 3,501-5,000; 2,001-3,500; 1,201-2,000; 1,200 & Under), is an attempt to organize libraries into the most homogeneous groups possible for purposes of comparison. Federation analyses were compiled by totalling all the libraries in the different federations.

The Montana State Library sends a statistical report form to all the 82 public libraries and the based questions asked of libraries on those designed for the Federal/State Cooperative System (FSCS). FSCS, part of the U.S. Department of Education, is developing and compiling standardized national public library statistics. All 50 states are participating in this process.

The Montana State Library stresses the need for timely and accurate statistical data from each of the participating public libraries. Except in cases where data supplied were illogical or when there appeared to be typographical errors, the data presented in this publication are as reported by the 82 public libraries. This report will be of use to those public libraries and federation headquarters working on budgets or researching specific library-related topics.

Comments and questions are welcome concerning any segment of this publication.
